

The current textbook of “*Key Leaders Opinion on Urogenital Cancer: Frontier and Progress*” represents a timely, complete and thus important contribution to the molecular understanding of urological malignancies in our modern times.

The book is divided into seven sections: progress in cancer genomics, molecular biology and pathology of cancer, metabolism and malignant properties, urine and exosomes, precision medicine in cancer, targeting cancer and molecular evaluation of cancer prognosis. Each section gives a comprehensive and insightful review on urogenital cancers, such as prostate cancer, bladder cancer, renal cell carcinoma, etc.

The book precisely displays the requirements of up-to-date uro-oncology, beyond clinical but genomic information enabling individual precision medicine for our patients—a “must read” for students, clinicians and scientists.
